Pat O'Neill - Dr. Ono
Jocelyn Paine - Oh Shit!

serious editorial

In the past, editorials in this paper have been of one sort of humour. For most of this year there will be editorials of a humorous tone, but there will also be a page in this paper devoted to the serious problems facing the student attending U of T. On this page you will find articles concerning this Faculty, i.e. articles from professors or the Dean, Eng. Soc. articles, and the University at large, i.e. SAC events, University happenings etc. We hope this doesn't shock anyone.

The first thing I would like to deal with is residence. If you have ever had to try and get it, you know that it isn't easy. You must have a lot of patience and be willing to fill out applications. This is due to only one reason, the lack of facilities to house the many new students coming to the university.

What is to be done? Innis is being built (at least this has been rumoured). This should alleviate the problem somewhat. But what if a student doesn't want to be part of a college (i.e. Professional Students i.e. Engineers, Pharmacists etc.). There is only one residence, that is professional student oriented, Devonshire and it's full. We don't want Simcoe Hall to have any of the old houses torn down to put up more concrete boxes, but there is one alternative left open - Rochdale.

Recently the problem has come up in city council - what to do with Rochdale. Alderman Bevis and others have suggested throwing all the tenants out and then turning it into an old folks home. It's not a bad idea to some, but to me it's an appalling suggestion. Not that I have something against old people it's just that it is such a good location for an official university residence. And not just any residence, but a residence for the

professional student - Nurses, Pharmacy, Dentistry, Medicine, Law and yes even Engineers.

If you are a non-professional you are probably now saying 'That's a bad idea.' But wait a minute. Devonshire is only for men and the professional faculties, especially Engineering and Pharmacy, are being quickly filled by women as well as men. (70 of last years first year Pharmacy class were women, and there will be at least 80 women in Engineering this year). Also if the majority of these students can go to their own residence, then there will be more room available at places such as New College and Knox for the nonprofessional student.

Another point in favour of this suggestion is that if it becomes a residence for U. of T., then it becomes the university's responsibility. Remodelled for co-ed occupation, the place would be as controlled as any other residence on Campus. The city would be rid of one of its biggest headaches.

Finally, for many years (or so I have been told) proper recreational and relaxation facilities have been promised for the Engineers. I admit it is not an ideal location, but they don't need to tear down and put up a concrete heaven when one already exists. (Where would it go any how?).

This is only a suggestion of what can be done with Rochdale. I think it is better than making the place an old folks home and it is certainly better than letting the place go on as it is. It is needed more and it is in a favourable location. If you agree with this editorial then contact city council and tell them. Or drop us a line, we will pass it on to them. If you don't agree, then tell us why and make your own suggestion as to what can be done with Rochdale.

GODIVA'S BOX

If we don't get enough interesting letters ourselves, we steal from other people.

Editor Toike Oike,

Your "Trawna Moon" February 7, 1974, was a classic. Definitely one of the best Toikes for years. A certain softness of texture only an aficionado could appreciate. Keep it up and stay away from dead bears!

Ross Eddie 6T7

Dear Godiva,

Being a fun-loving Engineer is not easy. I hereby wish to complain about the conflicting interests with my social life. First of all, there is little to do of interest in the period from 8 - 4 pm. Granted, there are trips to Hart House Farm, Orientation Pubs, and Frosh dances; even capers at lunch time, but the timetable of events given to each of us the first minute we walked into these hallowed halls are useless. I don't really think that watching a guy show me how to differentiate is my idea of a good time, when I could be somewhere else integrating. Could be a good year if you straighten up your social commissioner's ideas of a good time on weekdays. Also a helpful suggestion I would like to make is close down UC dining hall and make it into a combination LCBO/Beer Store/Whore House. This would serve the interests of all Engineers and get those women of ill-repute off the streets (and into bed where they belong).

Freddie Frosh
742376491

Dear Dumb Frosh,

The timetable was not for your \$800 social trip, but it was your course of study, and UC is full of whores already. Those artsies are all horny sleazes. Also, the dining hall is being licensed next year.

Godiva

Dear Godiva,

There once was a hermit named Dave,
Who kept a dead whore in a cave,
I must admit, he was a bit of a shit
But look at the money he saved.

There once was a man from Mantucket,
Whose cock was so long he could suck it.
He said with a grin, as he wiped off his chin,
"If my ear were a cunt I would fuck it."

There once was a woman from Coupe,
Who found an elephant wang in her soup.
Said "Waiter don't shout, nor wave it about,
Or the others will all want one too."

There once was a mathematician named Paul,
Who had an octagonal ball.
His penis plus eight, times his ball's cubic weight,
Equaled one half of one eighth of fuck all.

Women in Engineering

All Engineering women are invited to attend the Wine and Cheese Party to be held on Tues. Sept. 17 at 5:00 p.m. This is free of cost (sponsored by the Engineering Society) and is for women exclusively. Come out and meet all the other women in your faculty!

Metro Shinerama

Metro Shinerama is students from across Metropolitan Toronto taking part in a one day shoe-shining Blitz. Students from Ryerson, U. of T., York, George Brown, Humber and the School of Chiropractors will be on the streets today raising funds for medical research into Cystic Fibrosis (for you non-medical types, this is a disease which effects the lungs and digestive system of C.F. sufferers) an hereditary disease which is a major cause of death in young children.

In addition to the community

work aspect, Shinerama is fun. Its a chance for you to meet new people on campus and talk to people in the streets.

For the added enjoyment of Shiners only, a free dance and pub has been arranged at Ryerson in the evening as well as a free meal when you arrive. So dash on down to the Engineering Annex to register and hit the street for Shinerama. With your support, U. of Ottawa will at last be retired as defending Shinerama champs. Keep on Shinin!

WORDS FROM

THE President

As of August 30, 1974, I, Pat O'Neill, became President of the Society. This occurred due to Steve Swigger's not meeting certain academic requirements for this faculty. I would personally like to wish him the best of luck and only hope that I can continue the high standard of work he has done for the Society.

As for myself, I am in 4th year Engineering Science, Nuclear and Thermal Power, Option. My Engineering Society experience is encapsulated in my previous role as 1st. Vice-President Administrative. In this role, I became deeply familiar with the workings of the Society, to such an extent that I can truthfully say I am the best man for the Society. I hope you will come to agree with this assessment in the future.

We, you and I, will strive to keep up and surpass the high standards of activity, initiated by the Engineering Society Executive, during the summer and throughout the year. If you don't know me, for God's sake, find me.

NOTICE

V.P. ADMINISTRATIVE Eng. Soc.

Due to a change of executive responsibilities, the current V.P. ADMIN, PAT O'NEILL, has moved into the position President, Engineering Society, effective Aug. 30, 1974. In so doing, he has left the position of V.P. Admin. vacant. Nominations (3rd or 4th year only) may be made between Aug. 30 and Sept. 18.

The position of V.P. Admin. requires attention to detail. This person is involved in ordering the finances and security of the Society, as well as attending to those bureaucratic details necessary to the survival of any Society, chairs the Financial and Admin. Committee and is an ex-officio member of all committees.

The job is basically good managerial experience and

1st and 2nd Year

ELECTIONS

The first year elections will be held during Sept. 23 thru 26. These elections will be for:

- i) Class representatives to the Engineering Society Council.
- ii) Faculty Council Representatives.

As to the relative responsibilities of each position, I would point out that the Engineering Society meets only once a month; Faculty Council committee work only involves 1 meeting per 2 weeks and the Engineering Society council meetings too.

The Engineering Society Representatives from first year form a First Year Council to advise you and plan activities for first year students. The responsibility should extend to offering advice about improving orientation, even though this year's was unabashedly a huge success! These reps also find out all the nitty gritty about the Engineering Society and then tell you.

Faculty Council Representatives do much the same as above but have a further opportunity to present the student's view to the faculty at various committees concerned with curriculum, examinations, and timetables, etc.

Second year elections will be held in class Sept. 16 to 17. Elections will be for Faculty Council and Class Reps. If you didn't know what was happening last year or what the distinction between Eng. Soc. and Faculty Council was, don't you think it is about time you did? So think carefully choose wisely and you will benefit best.

provides you with a lot of experience in dealing with people. As to the work, no catching up is necessary since the summer covered a lot of ground and problems such that a great deal of orientation time will not be involved for the new man or woman. For more information, drop up and talk to Pat O'Neill.

The People's Choice

was to increase the efficiency of the Society by distributing work loads more evenly and by defining responsibilities. The establishment of archives and representation of women in Engineering were also of high priority. Outside the Society, I worked at voicing Society views and undergraduate Engineering needs with the Faculty, the Alumni, SAC, and COPOUT (Council of Presidents of U of T.)

My chief regret at leaving office is that I will not be able to personally see the things I have initiated, through to their completion. I take heart however, in knowing that the society is strong and in capable hands and can survive the loss of individuals. To those I must leave, I wish them every success both for themselves and the Society.

As for myself, I hope to return to Skule in the spring and strive for the degree to go along with the education I've been getting.

I remain
Stephen Swigger
Ex-Overlord of the Society

P.S. I AM NOT A
QUITTER

Calendar Problems

This year, due to problems at the printers, the Engineering Calendar is not yet available. We should have it in a week or two and it will be

distributed to you by your class rep. Until then, here is a list of some upcoming events the Society and the University have planned.

Thursday Sept. 12	Shinerama (This means you)
Friday Sept. 13	Frosh Dance at New College
Saturday Sept. 14	Carleton at Toronto (F.B.)
Monday Sept. 16	2nd Year Elections
Tuesday Sept. 17	2nd Year Elections Women in Engineering Wine & Coeese Party (ISC)
Wednesday Sept. 18	Eng. Soc. Council (Faculty Council Chambers GB 202)
Thursday Sept. 19	Cross-Campus Orientation Dance (Hart House)
Monday Sept. 23	First Year Elections
Thursday Sept. 26	Second Toike Oike

Changes and additional events (which there are sure to be) will be heralded by tiny toikes strewn in the official stair wells, as usual.

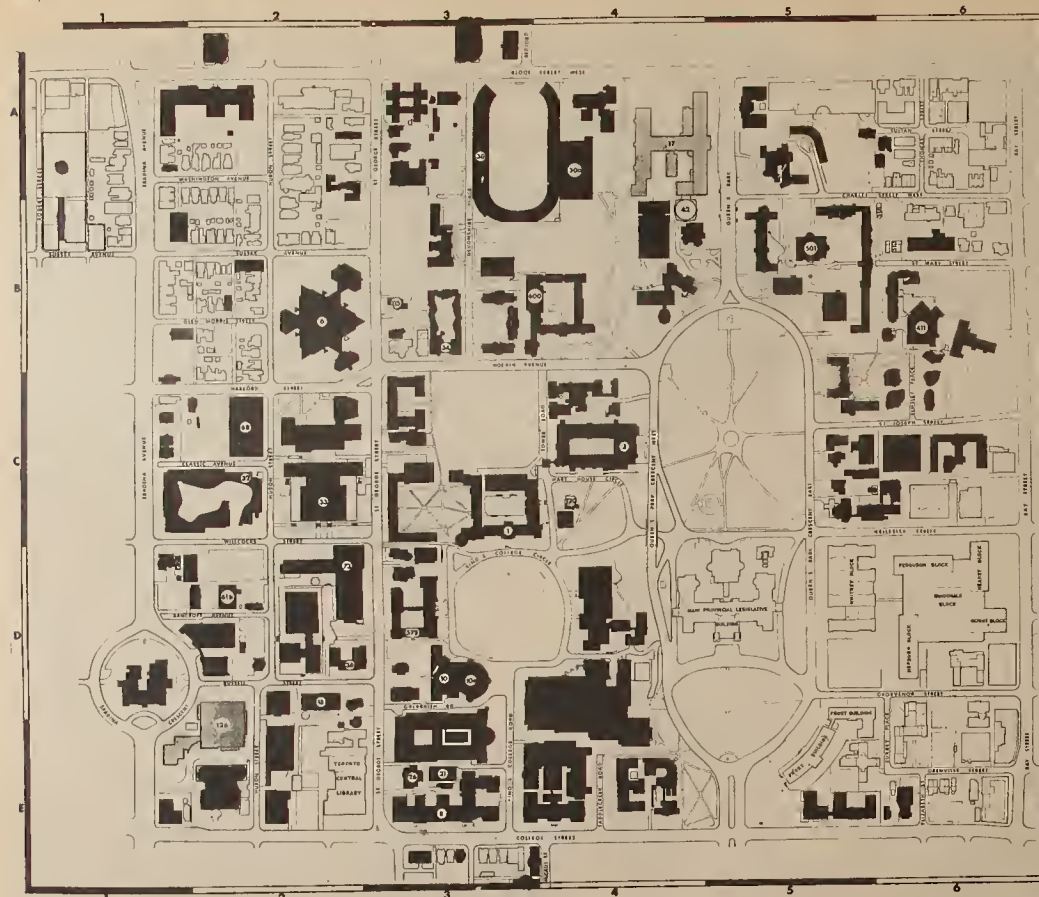

Overlord Goes Under

I would first like to welcome you all back to Skule and then to say that it is my sad unpleasant duty to inform you of my resignation as President of the Engineering Society. This resignation was effective as of August 30 and was necessitated by my failure to meet the academic standards set by this faculty.

When I took office on March 15, 1974, it was by acclamation, as I am sure you will remember. At that time I felt it my responsibility to

look to the needs of the Society and to take the job that no one wanted. The effort and time required to perform the duties of my new office were very demanding and, much as I loathe to say it, were contributing factors (although not the only ones) to my failure.

During my five and a half months as your President I have tried to improve communications within the Executive and within the Society as a whole. One of my biggest projects

THE TOIKE OIKE'S

Frosh Campus Guide

(conducted by U. Rinal)

It has come to the attention of the Toike staff that this year's crop of frosh know little or nothing about the great traditions and edifices, (i.e., buildings) of this university. So, as a public service, we now present to the entire university community, (even the Varsity), this extraordinary tour guide to the campus.

No. 126: This building houses the Addiction Research Foundation. You will note its relatively close proximity to the Engineering buildings. If you have ever attended an Engineering event, (e.g. Oktoberfest), then you'll understand why. If you've never attended such an event, drop over to the stores, ask Mario for your Alcoholics Anonymous membership card, and beat it over to the Addiction Research Foundation for your first drying-out.

No. 61B: Just north of No. 126, you will run across 61B. The official guide lists it as the "Textbook Store", but this misleading. It's not so much a store as a warehouse/barn /factory. Don't forget to check your briefcase at the door in one of the little cubbyholes provided. When nobody's looking, check out the other cubbyholes and see if there's anything worth borrowing.

SAC

The People's Choice

Tickets for all shows are \$4.00 (tax included) for U. of T. students. Available at the SAC office with ATL cards only!!

No. 32: This is of course Gnu College, who it is said, run a fairly good pub at times. (A crowded one anyway). It also happens to have the most racist graffiti on the entire campus. It is rumoured that the SDS will stage a Gnu cubicle burning this year.

No. 68: This is the Benson building, named after Edgar Benson, Canada's disastrous former minister of finance. It is the last remaining enclave of female chauvinism on campus. After all, Hart House has been opened to women, but the only times men get in the Benson is during exams, when there are usually few naked women around. Write your M.P. about this unjust situation.

No. 6: The so-called real name of this pile of stone is the John P. Roberts librationium, but the Faculty insists on calling it Fort Book. It is a marvel of architecture, costing millions of dollars and over one third of the floor space is taken up by hallways. Another interesting aspect of Fort Book is the way that it's channels all wind down towards the ground, in a futile attempt to prevent people from coming in. Avoid at all costs.

115: Across the road from Fort Book lies the Varsity, U. of T.'s answer to Pravda. Nothing more need be said about it, save to say that 2 years ago the Toike did a parody on the Varsity which was so superior to the real thing that we almost put them out of business.

34: Slightly south east of 115 we find Massey College, on the north side of Hotskin Avenue. This college was named after a famous tractor, (Massey the wonder-tractor), and has since been used solely for the training of tractor mechanics. It has been rumoured that Dr. John Evans is planning a jump over the Don Valley in a specially-built steam powered tractor now under construction.

No. 600: This of course is Trinity College, famous for it's rousing school song:

"Crumpets & tea
Crumpets & tea
We're the boys from Trinity,
We're not rough,
We're not tough,
But boy are we sexy."

No. 30: This is Varsity stadium, which turns into Toronto's largest open bar during Blues games. It would be wise to attend a game or two merely to get in practice for Oktoberfest.

No. 30A: During the winter months, when Varsity stadium rests under tons of snow, the bar is moved in to Varsity Arena to watch the Blues hockey games. A very romantic setting indeed, as the patrons are gently serenaded by the LGMB.

No. 17: The ROM, home of the original mummy made famous by Boris Karloff, is recently experiencing a cultural revolution. Chairman Mao has sent some examples of the art of ancient China, probably because there is no art in modern China.

No. 42: The McLaughlin Plantititorium is a good place to go if you can't get into a bar. There is absolutely no truth to the rumour that "Deep Throat" will be shown there this fall under the pseudonym, "The Milky Way"

No. 501: This huge red stone building, donated to the university by Charles Dickens is affectionately known as "Old Vic." Over the portals one can read the inscription "The truth shall make you free". There is no truth to the rumour that it will be changed to honour Canada's distinguished literary critic, Prof. Northrop Frye, to "The truth shall make you Frye."

No. 411: This of course is St. Mike's college, home of Prof. Marshall McLuhan, author of the famous book, "The Medium is a pain in the ass". Besides Prof. McLuhan, many other defrocked priests share the teaching duties at this institution.

No. 2: Hart House: Ever since women were admitted to this bastion of male chauvinism, there has been a movement afoot to rename it "Hard House" in an effort to accurately describe the effect the female presence has had on the male members.

No. 120: This is the SAC building, which the BFC has desecrated many times in the past and which it will hopefully continue to do in the future. SAC prepares the university for what is to come. In other words, SAC rips off the student now so he will know what it feels like when the government starts ripping him off in the future.

No. 1: This is You See College, which you can see during the day, but is dangerous at night because it is haunted. (Ed. note - this is true).

No. 575: This is Knocks College, from whence comes the old saying, "I went to the school of hard Knocks". Home of the God Squad.

No. 10: This of course is Simple Hall, home of Dr. John who was last year's Toike editor but was forced into retirement by a badly made water bomb.

No. 10A: Constipation Hall is the vantage point from which water bombs are found to be most effective. Stay tuned for the second annual Toike Burning and you'll see what we mean.

No. 26: This is the International Student Centre, a mere stone's throw away from the Toike office. This comes in handy when the Toike upsets any of the groups therein.

No. 8: This is the Harvey Wallburger building, so named for the famous drink that was invented there.

No. 432: St. Joseph's residence — This building used to be owned by the Christies (of "Mr. Christie, you make good cookies" fame). Unfortunately, Mr. Christie's son did not like the house so he hanged himself in the front hall.

No. 35: Royal Conservatory of Music — This building was the original McMaster University before it moved to Hamilton. When you pass it you can still hear a steel band.

No. 21: Lastly and most important we come to the Engineering Annex, home of the Toike. It also provides space for the famous Engineering Stores, ably run by Mario, the last of the red hot capitalists. Come on up and see us sometime.

Swill Bowl '74

On Sunday, September 8, the third annual Swill Bowl was held between the Champion Senior Swills: complete CFL rules, except no cleats or equipment.

The final score was Seniors 7, Juniors 35. However it was later discovered that one of the Juniors was wearing a cup during the game, so the team was immediately disqualified. Too Bad:

Skule Nite

Skule Nite is one small island of artistic sophistication amid an ocean of cultural diarrhea but the tide is out and we're building dikes along the shoreline! Anyone who has been involved in past Skule Nites will immediately recognize the truth of this simple, yet poignant, statement. (Who says Engineers don't know big words?)

For those who haven't been involved in Skule Nite before, like F'rosh, and those few who may not have even been (ha ha) to Skule Nite is the annual Engineering revue put on in Hart House Theatre almost every year. It is composed of short musical and/or comical skits lasting from 0-20 minutes.

During the 1950's Skule Nite became one of the major cross-campus social highlights of the school year. It died briefly in the late 60's but was resurrected in 1973 and is again becoming one of the major events in every Skule-person's calendar. This year's Skule Nite could be the best yet, if we get enough people working on it. There is an ad in this paper listing all the people we need. In particular we need writers immediately, if not sooner. Although we've had four writing meetings during the summer and are having another one this Sunday there's still a lot to be written. So if you'd like to take an idea, turn it into a short skit and see the skit produced on stage (complete with props etc.), or work on any other aspect of Skule Nite, (dancing, singing, acting) please leave your name in the Skule Nite Box in the Engineering Stores or call Steve Cress (director) at 622-1599. We Need You!

Calculators at The Stores

Of late, there has been considerable interest by the Engineering student body in electronic calculators. In fact, during the past year and on the first few days of this year, numerous requests for information regarding our position on these machines and our plans for their sale have bombarded June, Diane and myself.

In order to make generally known just exactly what the Hell is going on, this piece appears here.

Our main aim is service to the aforesaid Engineering student market. By service, we mean offering products which are generally not available elsewhere, or, if they are, at a significant price advantage. This commitment to

service must be balanced by regard for good business practice as well: that is, any inventory position taken should not become a burden to future operating years of the Stores. This is the sort of reasoning which has, for the most part, obviated any sort of calculator deal that has been considered in the past. In fact, it has sunk the current potential foray

in this market: the Commodore SR-36. If Eaton's can sell this unit for \$149.95, then we are unable to offer much in the way of a price break.

So much for current news. To bring the scorecard up to date, we set forth for your entertainment and amusement the history of Engineering Stores calculator deals that somehow never got off the ground.

MACHINE

HP-35

SR-10

UNICOM 202

RAPIDMAN 825

SR-50

SR-36

WHY WE DIDN'T CARRY IT

-no significant price advantage over U.S. sug. ret.
-immense No.'s of machines (351) to commit for.
-deal with T1 through the U. of Waterloo fell through at the manufacturer under mysterious circumstances. (current version - 6 mos. lead time to first machine)

-technically superceded within weeks.

-manufacturer went out of business. Like Pearl Harbour, the envoy was talking even as the bombs were dropping.

-not yet available in Canada.
-T1 will deal only with the Bookstore on campus.

-no significant price break.

Until some combination of complete engineering functions, i.e. trigs, exponentials, memory, scientific notation, etc., good price which we can pass along at a significant advantage, assured supply and service, and reasonable delivery and lead times appears in a single machine, the Engineering Stores will not touch this business with a 10 foot pole. After all, if an organization the size of Eaton's can take a bath in the calculator market, what right have we to even try to get our feet wet?

f! f! f! FROSH

1/12th OF A GROSS OF FROSH
QUESTIONS

1. Why does Front Campus face the middle?
2. Why are there no left-handed desks in MBI28?
3. How cum they use V's for U's in Hart House (or is it Hart Hovse)?
4. How cum Skule is not spelled Skool?
5. How cum the Wallberg Building looks like a big washroom?
6. Why is the expletive in F! not deleted?
7. Where is the Roseburg Building?
8. Who is Doc Ivey?
9. Why are there no men's washrooms on the 2nd floor of the Galbraith Building?
10. Why are there men's student and staff washrooms? (We are at least as much men as they are).
11. How do you pronounce T*IKE *IKE?
12. Is St. George really a pedestrian mall?

Hart House Farm

In keeping with usual hunga dunga type tradition, approximately 150 naive froshies were lured to front campus at 7.00 last Saturday morn. After a big bang (from the cannon), the froshers had an opportunity to exhibit their athletic skill under the careful observations of the upperclassmen.

After the band (who will forthwith be referred to as the slackers) assembled the Frosh as a whole, formed in fine marching style and progressed up St. George to Gnu College. While arousing (?) the artsies over the Gnu College and Whitless Hall, we had another big bang and a little music from the Slackers. From there we boarded our buses (4) and we motored up to HHF. The eager beaver Froshers were hastily sentenced to 2 hours hard labour moving logs while the band played on. After that everyone was busy except for the upperclassmen who supervised and drank beer, and hid in the bush, respectively. And the band played on.

After lunch the whole group was treated to a frosh concert with

renditions of TOIKE REJECT JOIKES, while the band played on.

The Frosh seized the opportunity to provide compulsory dunking to all unsuspecting upperclassmen (who shall forth-with be termed as UCM). This was disguised as revenge for the UCM's heartless treatment of the Froshies. The band still played on.

The day wouldn't have been complete without a game(?) of 4-sided Toilet Bowl. The teams were the Tits, Scrotum Ratshits, Whore Screwers and Pussies (UCM). The Scrotums came on hard at first while the Tits pussy footed around the Whore Screwers. But the Tits soon bounced back, and after that the Scrotums couldn't seem to get it on. The Whore Screwers couldn't really get into it and the Pussies stunk anyway. So the final scores were 5,4,1,1, (in the order of introduction).

A few extra notable points worthy of your concern. Among those dunked - Rhys Beak and Steve Swigger. Those intimidated by Vidas - too numerous to mention, and still, the band played on.

f! f! f! f! f! f! f! f! f! f! f!

Orientation

Orientation day, in the frosh's opinion, was a bit of an anticlimax following the fun and games of registration day. The day got off to a bad start with a mandatory "English Facility" test. Most frosh felt this was an un-nice and useless activity and all were unimpressed with the new approach to the "what did you do in the summer" essay. Adding insult to injury was the fact that this exercise ran into our lunch hour. A gourmet lunch at the Arbour room answered our questions about what happens to artsmen who don't make it past first year.

Things picked up a bit in the

afternoon when we learned what we were in for in the next year. Helpful hints included where the johns are in the Galbraith building and how and how not to grovel. The highlight of the afternoon was the frosh pub. Although the pub started off rather quietly it soon assumed the tone of a middle-east battle zone. Flying cups and beers provided a light rainfall but it couldn't dampen the spirit of our thirsty Froshies. The highlight of this aquatic event was the chugging contest. The after effects were exhibited in the washroom sinks shortly after as the Frosh showed their lack of experience in fluid dynamics.

f! f! f! FROSH

L.G.M.B. Blows Again

Once again the L.G.M.B. held its annual September beer festival, otherwise known as the first practice of the year. To cries of "encore" and "bravo" (from the band), the L.G.M.B. produced a variety of sounds, which could almost be confused with music. The practice started in GNU College quad, and after we arrived at the farm several of the members learned what they were supposed to be playing at GNU College. At concert time, the nervous and/or drunk musicians had almost forgotten what they had almost learned in the morning. Beginning with a moving rendition of "O Canada" the band had the crowd on their feet. However, the band soon returned to the familiar style which the L.G.M.B. is famous for. The

playing of "The Stripper", by the band, provoked a contest to see who had the longest - the band leader (yours truly) won pants down! Everyone was so impressed that all the buses left without the band leader. (Actually I was in the bushes and lost track of the time!)

Upcoming Events

F!rosh Dance - Fri. Sept. 13
Football Game - Blues vs. Carlton, Sat. Sept. 14.
McGill Weekend - Oct. 4, 5, 6
NOTE: New members are still welcome, you don't have to be an engineer to join. The benefits of being in the band are bountiful. All rentals will be subsidized. Sign-up list is located on the second floor of the Engineering Annex.

Jim Burpee

1 of Scavenger Hunt

This year's version of the scavenger hunt was wilder than the usual. The ever anxious Frosh perloined every and anything, not only from U. of T., but Ryerson and York, to gain the traditional prize, Free Beer at Oktoberfest.

The thing that caught your eye first of all was the amount of stuff stolen. Two 10' high steel lamps (black cast iron), a large disposal bin, War Room door (of course) man hole covers, three or four railway ties, Ryerson signs (some from the inside, many from the outside), street signs, the two flags from Queens park, we hear that a cherry from a cop car was taken, a Grey Coach Sightseeing Bus the

wrought-iron turrets from U.C., a Trinity Frock (off the guys back no less), lab coats, Mario Da V (this group lost points), signs and equipment from the t*ike office, Adidas bags, a Queensman, and a partridge in a pear tree.

To protect its own interests, the society locked its doors and put on guards, bid the Coke Machine in the president's office and most of the important figures hid themselves. The things stolen were of course returned by the society, but there were a few things left and they can be found at the stores and will be returned for a minimal charge. As usual the band won again.

Captaine Slick

f! f! f! f! f! f! f! f! f! f! f! f! FROSH

This is a Relatively Good Article

The last in a centennial series of educational and informative articles that will teach you a whole lot.

by Prof. L.E. Fance

As you will recall from my last article, people have been trying to prove the theory of Relativity for nearly e^3 years. In fact, the cause was nearly lost during the later Carboniferous era when interest almost died out. But back to the subject at hand...

All you Doctoral Nuclear Physicists and F'rosh Skulemen know that no one has yet proven this harebrained theory. After all, does your Fender Telecaster move at the speed of light?

At last, though, I (the phantasmagorical L.E. Fance, renowned genius and all-round great guy), have conquered this centuries-old enigma, the raison d'être of thousands of angry scientists everywhere.

And by following this simple recipe, (everybody knows that experiments are cooked anyway), you too, dear reader can henceforth embark on a life filled with fame and fortune as a pioneer of the upcoming revolution in applied experimentation:

Apparatus:

2 trustworthy friends, or alternatively, 3 syphilitic drunks and a stray collie.

1 extremely sensitive and accurate mass determination device, preferably a Perfecto model

No. 1 bathroom scale. (Avoid at all costs being stuck with model No. 2, because this is a coin operated (no springs) model and you could get the penny in on time).

2 CN Towers (so you can double check your results).

1 moron (this means you).

Procedure:

Place the CN Tower large end down in a solid position so it will not fall and break. Place the scale beside the tower and instruct one of your friends to observe and record the reading on the scale after your signal. If using the alternative method, have the 3 drunks average their results for greater accuracy.

Climb to the top of the tower, and, aiming carefully at the scale, dive off headfirst. This is very important because only the aerodynamic properties of a pointed head will enable you to reach the speeds necessary for best results. When you are about shoulder height above the scale signal your friend(s) to make the reading. Have the remaining member of your team observe and record carefully your change in shape, (Δs), then go for an ambulance.

Calculations: As I said in my last article, m&v according to the Theory of Relativity. Since your velocity on impact is greater than normal, your weight should be greater than normal too.

The Δs should show that you appeared shorter and fatter than normal which also substantiates the theory.

Places To Go

So you're new on campus and you want to know what this town has to offer? Even if you're not, still live and learn.

If you're in search of records in and around the campus area, you will be glad to learn there are some good shops with in easy walking distance. These include Round Records, on Bloor just east of Bay (one floor high), A&A's one in the Colonade, the other on Yonge, south of College, Sam's, in the same locale, Music World also on Yonge, Target Tape, south of Bloor on Yonge. These all have good selections of pop, jazz and the like. The best classics selections are to be found at A&A's on Yonge and the Book Cellar, 142 Yorkville, at Avenue Rd.

Putting in an unsolicited plug, the best place to buy Skule supplies is at the Engineering Stores (one floor high) in the Engineering Annex (old Press Building). If they don't have what you want, there is A&A's on Yonge. Coles at Dundas and Yonge and again north of College, Hughs-Owens on Yonge and in a pinch, U. of T. Bookstores.

If you are on a limited budget and want to impress a sweet young thing - ie. eating out, then we recommend Pipin's Dining Place, 627 Bay Street (see their ad). The cuisine is Italian or Seafood and is very good, and like we said relatively inexpensive. If you aren't critical of what you put in your stomach there are many Pizza and Burger joints close by, and some deliver. To name a few, we have Pizza Patio, Harvey's, Swiss Chalet, Wallbangers, the list goes ever on.

If on the other hand you are looking for a place to purchase alcoholic beverages, then let us tell you. If you like animal shows then the Brunswick is the place to be (downstairs only). There is also the Nickelodeon, The Yonge Station and the Old Barvaria just to name a few.

By the relativity theory, $t = 1/v$. This would mean that you would be about 160 years old on impact (I'll worry about the Math, you follow instructions) and would, of course, either have perished of old age long before, or be very infirm.

An Introduction to Cu-7 (Copper Seven)

Intrauterine Copper contraceptive

What is Cu-7?

Cu-7 consists of a small plastic 7-shaped carrier which has a fine copper wire wound around the stem and a nylon thread attached to the base. The copper is the main contraceptive; the plastic serves as an inert carrier for the copper.

Recently Searle Pharmaceuticals came out with a new IUD which they called the Cu-7. They claimed it was 99% effective and therefore competitive with the pill. Simultaneously, but independently, Preg-not Inc., a wholly owned subsidiary of Toike Oike International has developed a device which, on the surface seems similar, but is in fact, far superior. It is called the RU-7, because rather than relying on old fashioned copper, the RU-7 opts for good old rust. Basically, it is a 1½ inch old rusty fishhook on a thread, scum optional, cumming in two colours, basic brown and soungey green.

1. How effective is the RU-7?

Would you slip your dick in the cavernous canyon with a fishhook in it? The worm you save could be your own!

2. How is it fitted?

It is fitted by a doctor who is an expert with the device shown below.

3. Is it painful to have the RU-7 removed?

Normally no. However, if you lose the thread you will have to go to your doctor's workshop and ask him to operate with his handdrill and ¾ inch bit.

4. Will I feel different?

Once RU-7 has been inserted, its presence is not normally noticed. Because of its shape the RU-7 fits securely in the womb and is unlikely to come out even during strenuous exercise or straining. You can check to make sure the RU-7 is in place by feeling for the thread (attached to the base of the device) which passes through the neck of the womb into the vagina.

The thread is not normally noticed by either partner during intercourse. It is fleshtone.

The RU-7

5. Will it harm me in any way?

You do get little green on the inside.

6. What if I want to get pregnant?

The RU-7 can be simply dissolved by douching with nitric acid.

7. What happens if I get pregnant?

Wait six weeks, jerk on the thread and pull out a new taste treat, fetus-on-a-hook!

3) RU-7 is active as soon as it has been fitted (it will rip, any tool to shreds).

4) Easily removed by any doctor or fish.

5) Cheaper than any other presently available contraceptive device. (How many other contraceptives can you find at the bottom of the Don River?

8. How long does RU-7 last?

What an ass-hole question! How long do you think you can keep it up?

9. How often should I see my doctor?

With this device, you can safely see him every night.

Why Choose RU-7?

1) It can be used in conjunction with our stainless steel condom.

2) It holds your tampon in place.

6) RU-7 is not likely to be expelled because of its small size and special shape. It will hook in somewhere.

And what does your average man-on-the-street think of the brand new RU-7?

"Shit man, use the pill. If you hit the hook, you spring a leak and you're cumming in two directions. Then you gotta bandage the fucker up and nobody'll suck a dick with a band-aid on it."

Cup o' Coffee for Sleepy Spermatozoa

\$9149x in *Medical World News* 15(19):
46, 10 May 74

... C. Schoenfeld and some colleagues at NYU School of Medicine have verified that caffeine does improve and prolong the motility of sperm. That suggests both caffeine-treated sperm aliquots in artificial insemination, and a precoital caffeine douche when male subfertility is a problem. A highly interesting point is that the findings contradict the widespread belief that whatever increases the activity of spermatozoa shortens their lives.

VERY POOR JOKE PAGE

NEWS ITEM: The Italian population of Toronto has now officially exceeded that of the white anglo-saxons, creating, simultaneously, a new majority and a new minority.

Keeping with our policy of moving with the times, the T*IKE *IKE is proud to announce that from this time forth, we shall no longer print any minority jokes and shall put the shoe on the other foot by only printing majority jokes. Did you hear the one about the Italian snow tires? ...

The Strange Case of the Girl O' Mr. Sponsoon's Dreams

Once upon a time there was a man named Mr. Sponsoon who was highly ineffectual.

He always looked as if he were growing a moustache.

His singing voice was pretty fair, except for the high notes.

Oh yes, and the low notes, too.

One day he was driving along the street when he saw a beautiful girl.

My, what a beautiful girl, said Mr. Sponsoon. I wish I knew her name.

If I asked her name, said Mr. Sponsoon, she might think me a brazen cad.

But if I don't know her name, she will go out of my life forever.

Mr. Sponsoon thought and thought.

Suppose I run over her gently, he thought at last.

With one wheel, say.

Certainly with no more than two.

Then I can read her name in the morning paper and all will be hotsy-totsy.

Mr. Sponsoon pointed his car at the beautiful girl.

The beautiful girl leaped like a thoroughbred gazelle.

Mr. Sponsoon chased her for seven blocks and never laid a wheel on her.

In the middle of the eighth block she stopped to moisten her finger on account of a run in her stocking.

Mr. Sponsoon read in the morning paper that her name was Shella Schminck and she was in Percy's Hospital.

So he went to the Mercy Hospital and asked for Stella Smith.

To the girl o' his dreams he explained his little stratagem.

Girl o' my dreams, I had to know your name, said Mr. Sponsoon, avoiding high notes and low notes.

Say you forgive me, girl o' my dreams.

Say all is hotsy-totsy.

The girl o' Mr. Sponsoon's dreams said all was far from hotsy-totsy.

All was coldsy-tolsdy, said the girl o' Mr. Sponsoon's dreams.

Mr. Sponsoon joined the Foreign Legion, but was soon expelled because he admitted helikeit.

Due to an unfortunate misunderstanding, my mother threw out all my Nat. Lamps., Playboys, Penthouses and Family Circles. Thus, my previously inexhaustible supply of j*ikes has been suddenly depleted. Therefore, in an act of complete desperation, I am calling out to you, oh cynical reader, to send me (J*IKE EDITOR c/o T*IKE *IKE ENGINEERING STORES) any humorous, bawdy, original songs, j*ikes, limericks etc. that you may find in the top left drawer of your sister's vanity. No j*ikes will be censored but we cannot guarantee their exclusion from the G-file.

A.G.I. at a smoker in Thule
Asked a woman who'd sucked off a mule:
"Don't you find that quite sordid?"
"Mais non," she retorted,
"In Spain, we are taught this in school."

A hygienic young miss from out West
Asked the cowboy who sat on her chest:
"Will cum cause decay?"
"No, ma'am, I've heard say
It's the secret ingredient in Crest."

A gay termite goes for woodpeckers.

Scotsmen don't believe in public education ... that's why they wear kilts ... to keep their private school ...

A young pubescent rooster walked up to a young hen and said, "How about it, Miss Pullet?" She coyly said "you must be Mr. Capon ... none of the roosters ever ASK."

Many a pubescent young girl has discovered that a bottle will loosen her up, long before she has learned how to drink ...

How Many Polacks Does It Take To Screw In A Lightbulb?
For those of you who don't know, the above is the question segment of a "Polish joke" If, indeed, the term "joke" applies to so-called humour that is little more than an excuse to indulge in tasteless ethnic slurs such as defining a coke fork as "a tiny, silver fork used by Polish cocaine addicts" or claiming that Polish terrorists send postcard bombs.

Two black guys were strolling down a dusty country road one hot humid day. After walking for half an hour, Leroy said to Jefferson, "Boy, it sho' is hot." To which Jefferson replied "Yass, it sho' is." After another half hour walking, Leroy said

When last heard of, he was borrowing a burnt cork from Amos and Andy.

He said he had decided to steal into Rome as an Ethiopian spy.

THE END

-By Ogden Nash

"Hey Jefferson, do you think ah'd be any cooler if ah took off mah shirt?" Jefferson lazily replied "Ah don't know. Why don't you take it off and find out?" So Leroy did. However, this did not seem to work very well.

After a while, the two boys came upon a rundown shanty with an old black mammy sitting on the porch with her feet propped up on the railing. They were mildly surprised to also find her legs spread, dress hitched up above her waist so that it was very obvious she wasn't wearing any panties. To cap it all off, she was eating watermelon.

Leroy approached her, his curiosity aroused, and asked her "Hey mammy, is it any cooler without your panties on?" to which she slowly answered "Ah don't know about it being any cooler, but it sho' do keep the flies off the watermelon."

Geographical Estimate Of Women

From 14 to 18

She is like Africa - partly virgin and partly explored.

From 18 to 24

She is like Australia - highly developed in the built-up areas.

From 24 to 30

She is like America - highly technical and always seeking new methods.

From 30 to 40

She is like Asia - sultry, hot and mysterious.

From 40 to 50

She is like Europe - somewhat devastated but still interesting in places.

From 50 to 65

She is like Antarctica - everybody knows where it is but nobody wants to go there.

The Fisheries Commission of Canada had decided that a certain lake in western British Columbia was to be stocked with fish, principally COHO salmon. So they created a waterway, a fish ladder, if you will, to accomodate the travel of the salmon from the ocean to the lake.

However, the waterway they made proved to be too hazardous. All the fish were dying 1/4 of the way up, due to the rapids and falls. The scientists then decided that a larger, sturdier breed of fish had to be developed to enable this lake to be continuously stocked with fish. The biologists ultimately decided to cross the COHO salmon with larger and stronger WALLEYE (pickerel) and called this new breed the KO-WALL.

However, this breed again proved to be of insufficient size and strength to survive the

waterway. They could only make it 3/4 of the way up. The biologists, determined to succeed, decided that an even larger and stronger breed had to be developed. So they created a hybrid by crossing the new KO-WALL breed with the very large MUSKY (muskelunge) and they called this new breed the KOWALSKI. The only trouble was they had to teach it how to swim first

Airline Hostess: Would you like some of our special TWA coffee?
Passenger: No, but I'd love some of your TWA tea.

Census Taker: Kinfolk?
Sweet Young Thing: I kin folk a little.

Excited Husband: Quick, Mary, I just got my semi-annual hard-on.
Incredulous Wife: You mean you just got your annual semi-hard-on.

"This is going to run into money!" said the monkey as he pissed on the cash register.

If all the freshman up at Carlton were laid end to end - I wouldn't be surprised.

The best way to make a bull sweat is to give him a tight jersey.

How do you tell a Polish ballerina from any other?
When she does the splits, she sticks to the floor.

Did you hear about the old Russian hooker who sat on the bar stool, and slowly sank to the floor?

Q: What's the difference between a rooster and a shyler lawyer?
A: A rooster clucks defiance.

Q: What's the difference between a seagull and a baby?
A: A seagull flits along the shore.

Q: What's the difference between an opera director and a baby?
A: A baby sucks his fingers.

Q: What's the difference between a well-stacked blonde and the same dame in the nighttime?

A: In the daytime she's fair and buxom.

Q: What's the difference between a skinny dame and a counterfeit dollar bill?
A: A counterfeit dollar bill is a phony buck.

Finagle's Law

Laws of Experiment
First Law: If anything can go wrong with an experiment, it will.

Second Law: Everything goes wrong at the same time.

Third Law: Things left alone can only go from bad to worse.

Fourth Law: Experiments must be reproducible; they should fail in exactly the same way every time.

Fifth Law: Build no mechanism simply if a way can be found to make it complex and wonderful.

Sixth Law: No matter how an experiment or test proceeds, someone will believe it happened according to his pet theory.

Corollary One: No matter what the results are, someone will misinterpret them.

Corollary Two: No matter what results are anticipated, someone will be willing to fake them.

Laws of Mathematics
First Law: In any collection of data, the figures that are obviously correct, beyond all need of checking, contain the errors.

Corollary One: No one whom you ask for help will see the errors.

Corollary Two: Everyone who stops by with unsought advice will see the errors immediately.

Second Law: If, in any problem, you find yourself doing a transfinite amount of work, the answer can be obtained by inspection.

Corollary: If inspection fails to yield the desired results, judicious application of one (or more) of the methods outlined later in the text may be in order (von Nagle's Constant).

1 The main body of these laws was formulated during the time Erich von Nagle was trying to prove his fundamental discovery that "... if a string has one end, then it must have at least one more." Although he was unsuccessful in his proof because, at that time, the tables of elliptic integrals had not been sufficiently developed, these laws stand as a lasting monument to his work. Professor von Nagle moved to Ireland, where his associates misunderstood the pronunciation of his name, hence the misnomer, "Finagle's Law."

Are Jews White People?

Technically, yes, but.....

SPORTOIKESPORTOIKESPORTOIKESPORTOIKESPORTO

Well, another year of Skule begins. After an outstanding year in which the Skulemen captured athletic supremacy at the U. of T. what we do for an encore? Cum on now, let's try for a repeat performance.

As you have probably seen football notices have already been put up. If you enjoy butting heads after receiving an electricity problem set football may be your sport. If you like violence however, try soccer. For the saner, Skule has revived track. Not to be taken too seriously, there is a rumour that the plumbers will attempt to win the interfac meet. If you want to find out about these sports contact your rep at the stores or anywhere else you may find him.

Sports is not only for the jock. In recent years class tournaments have grown in popularity as have class teams in intermural activities. Rumour has it that N.Y. III is already in training to challenge 1st year to a hockey game. By the way these teams are a great way to get into shape and to try a new sport.

To contact the appropriate people just put a note in your sport's box at the Engineering Annex.

Free Jobs

Now is the time for all good men ... to think about summer and permanent jobs - after all you've already had three classes. Yes, believe it or not (apologies to Mr. Ripley the earlier you apply the better. But, its also important how you apply.

Find out this stuff and much more at Professional Development sponsored Placement Centre Seminars. Find out the who, what, when, where and how of summer job and permanent job hustling.

All know Placement Centre staff will present informative (to put it mildly) seminars for fourth year on the 18th and 19th. of September and for first, second and third years on the 18th of October. Consult your class reps. and Professional Development posters for times and places.

EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT...

Besides the Placement services already explained in an article hidden somewhere, the Professional Development lackies will present at absolutely no charge, a bonanza of useful stuff.

A planned continuing presentation will be a series of quasi-lectures subjects in one 40 minute spectacular. What better way to choose electives or options than by seeing what you'll be in for. See if the subject and some of the lectureers appeal to you before you sign that dreaded Q-2 form.

Look for their lectures probably at noon starting in October. These and other stuff will be announced brazenly by gaudy PROFESSIONAL DEVELOPMENT posters.

Look for them and cum.

LABATT'S 50 GRAND PRIX OF CANADA

Mosport
Sept. 20, 21, 22

Organized by C.R.D.A. Sanctioned by C.A.S.C., F.I.A.

THE RACE. Grand Prix is the absolute ultimate in car racing. This is the one they write novels about, the one they make movies about. It happens only once a year in countries around the world, and it's happening in Canada at Mosport, September 20, 21, 22.

THE DRIVERS. The best drivers in the world will be here, including former World Champions: Graham Hill, Emerson Fittipaldi and Denny Hulme. Other top international drivers include Mario Andretti, Niki Lauda, Ronnie Peterson and Jody Scheckter.

THE CARS. You'll see and hear the ear-shattering scream of the world's most sophisticated machinery: Ferrari, McLaren, BRM, JPS Lotus, Brabham and Tyrrell.

THE EXCITEMENT: The points race for the Drivers Title is the closest it's been in years.

THE WEEKEND FUN. You can make it a great camping weekend. Practice and qualifying days are on September 20, 21 with Race Day on the 22nd. Mosport offers free camping, firewood and water. Special SuperTickets include everything for all three days — entrance fees, grandstand and pit passes.

It's an experience you'll remember for a long, long time.
